DISPLAYGUARD®

Get The Message!

DISPLAYGUARD® electronic industrial safety display combines a protective steel guardrail with a highly visible computer-directed electronic display that can be read from 200 feet.

DISPLAYGUARD® software is Microsoft Windows® based and is easy to install. The software establishes the security levels and password protection to grant each user access to different levels of communication.

Users can create custom messages or select from over 250 pre-programmed messages. Security personnel or executive management can override messages in crisis situations.

DISPLAYGUARD® software can support multiple signs and allows you to schedule messages for future dates and times.

DISPLAYGUARD® can easily be incorporated into a new installation or retrofit into an existing plant system. Shims are available to accommodate 4" or 5" square columns and rail is predrilled to accommodate most guardrail manufacturers. The unique workbox provides easy interface between the **DISPLAYGUARD®** unit and the facilities computer system.

Let **DISPLAYGUARD®** improve safety and communication in your workplace.
